Work experience

[Cimpress Technology](https://www.cimpress.com) - [cimpress.com](https://www.cimpress.com)

July 2017 - Present

Lead software engineer

I'm leading a team within Logistics organization responsible for automated post-processing of shipments within Cimpress platform.

Technologies: JavaScript (Node.js, React, Redux), AWS, Kubernetes, Docker, Serverless

[iflix](https://www.iflix.com) - www.iflix.com

January 2017 - June 2017

Software engineer

I've worked on integrations with partner TELCOs in Africa and Asia. Some of the challenges were keeping **data consistent across the architecture of microservices**.

Technologies: JavaScript (Node.js), AWS, Kubernetes, Serverless

[SalesChamp](https://www.saleschamp.eu) - www.saleschamp.eu

August 2011 - December 2016

Co-founder, Lead developer

I've created the architecture of back-end and front-end of software focused on **improving the workflow of door-to-door sales force**. The system allows modular integrations with 3rd party client APIs, imports and exports of big amount of data and its visualization.

Project goals were to make the front-end of our application available on variety of Android and iOS devices and modularity of interface to allow most effective workflows for different teams.

Some of my challenges were implementing process of writing **automated tests** and **doing code reviews** to increase the quality of delivered software. Technical challenges included making system responsive while **processing large data sets**.

Technologies: PHP7, JavaScript (Backbone.js), MySQL, MongoDB, Ansible, Docker

Contact person for references: Roman Zigo (roman@saleschamp.nl) +420 777 846 616

Freelance developer

2008 - 2012

I've delivered several international projects as external full-stack developer using [Nette framework](#) & Wordpress on server side and jQuery on client side.

Nonprofit activity

[BrnoJS](#) - brnojs.cz

December 2013 - Present

Co-founder

I'm organizing **events for JavaScript developers** in spare time. BrnoJS was the first JavaScript meetup in Brno, one of our challenges was to build the community of developers and network of event sponsors. **Our group grew to over 500 members in 3 years.**

Public talks

I visit conferences and meetups related to modern development principles and speak at these events, some examples are listed below.

[How to compete with a native app](#)

budapest.js, vienna.js - January 2014

I've described solutions of most common problems when developing web application that looks & feels like a native app on mobile platforms.

[Working with data in Backbone.js](#)

BrnoJS - January 2016

I've explained concepts of combining different data storages such as WebSQL, localStorage together with REST APIs & promises, offline first approach.
